A few reasons why you should publish in *Annals of Forest Science*...

The highest scientific review standards

Only high quality articles are published. Your manuscript is reviewed by international referees selected by the journal's Editorial Board, with a **double-blind procedure**. Authors provide a clear information about the **funding** that supported their research, and the **precise contribution of the co-authors**.

Rapid publication and efficient dissemination

AFS produces a **first decision in less than 2 months** after submission, and accepted papers are published online in a few weeks. The support of Springer will contribute to a wide dissemination and easy access towards the international research community.

Online First

The **article will be published online after receipt of the corrected proofs**. This is the official first publication citable with the DOI. After release of the printed version, the paper can also be cited by issue and page numbers.

Open Choice

In addition to the normal publication process (access is granted to customers with a subscription), Springer provides an alternative publishing option: **Springer Open Choice**: your manuscript will be freely accessible to all researchers at a cost of 2000€.

Thematic Issues and Review Papers

In addition to original research articles, AFS encourages authors to send **Letters to the editor** and **opinion papers**. AFS invites scientists to submit proposals of **Thematic Issues** (under the responsibility of Invited Editors). AFS is happy to publish **Review papers** on relevant and timely topics. In the latter case, the Editor-in-Chief sponsors the Open Choice Option for authors publishing Review papers. Please refer to the open call for reviews at <http://www.springer.com/13595>

Open data-bases in forest ecology

AFS opens from 2012 on a new section aiming at publishing meta-data that describe shared and **open data bases in Forest Ecology**.

E-Alerts

Springer offers you free registration for the email alert services that informs you of the content of new issues.

Copyright policy

You are free to **post your article on your own website** or the site of your institute as soon as it is published, providing the Springer source is cited.

Pay-per-view

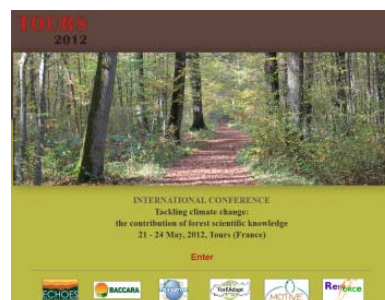

With this option, you can view and download the pdf of articles to which you do not have a subscription.

Call for submissions

for a thematic issue

"Tackling climate change"

Annals of Forest Science has the pleasure to invite all researchers participating to the conference at Tours during May 2012 to submit a manuscript for publication based on the results presented at this conference. The manuscript will be edited as a thematic issue of AFS, under the supervision of two editors, JL PEYRON (ECOFOR, Paris) acting as an invited editor for this issue) and M HANEWINKEL (WSL, Zürich) acting as the Associate Editor in charge of this issue.

Submitted manuscripts may be research papers providing original research results, and review papers. The latter may be offered a free of cost Open Access by the journal, to maximize their visibility and impact. This thematic issue will be made visible on the web pages of the journal and we will produce a specific printed issue if there are enough (>15) papers.

All manuscripts will be handled as regular AFS manuscript. They should be submitted on the journals website (<http://www.editorialmanager.com/afsc>). They will be handled by the chief editor and the two editors in charge, following the usual procedure for assessment and selection of the journal (double blind peer review, same quality criteria).

Submission recommendations

- Before submitting your manuscript, check if the presentation complies with the instructions to authors displayed at: <http://www.springer.com/13595>. Be aware that 30% of the manuscript submitted to AFS are returned to authors because they do not comply with important quality criteria of the journal (clarity, novelty, scope of the journal).
- While submitting, provide a cover letter explaining what is the main novelty brought about by the manuscript and specify that it is submitted in the frame of the present call "Tackling Climate Change".
- Please notice that the papers will be published on-line as soon as they are processed, with no additional delay due to the thematic issue.
- For inclusion into the thematic issue, the manuscripts need be submitted before October 2012. Manuscripts submitted later will be considered for regular issues of Annals of Forest Science.
- For additional information, please contact the Editorial office of Annals of Forest Science: ann.for.sci@nancy.inra.fr
